

### 3.221 Software Update Features

No.	Features and Benefits	Description
1	What's new in this software release:	<p>New features have been added to your ScanPro 2000 software as we continue our commitment to make working with microfilm easy, efficient and fun!</p> <p>All controls have been designed to have the look and feel of typical Windows programs. Common graphics and icons are utilized throughout and all buttons have text labels that can be customized. The design goal has been to continue to provide the easiest to use interface with the shortest possible patron learning curve.</p>
2	Film Selection Wizard.	The Film Selection Wizard is a start screen that can be used by the patron to automatically set up the scanner for any film application. The patron matches the film to be used to the corresponding graphic on the screen, clicks the graphic and all of the settings that are needed for that application are automatically recalled. The administrator can elect to use or not use the Film Selection Wizard in the password protected set up screen.
3	Save and restore all scanner settings	All settings including magnification and focus can be saved and recalled with a single click.
4	Customizable folder tabs.	The button controls can be grouped and arranged using folder tabs to keep the tool bar simple and at the same time allowing quick access to the powerful ScanPro 2000 features.
5	Customizable toolbar for all controls.	The administrator, using a password protected menu, can select which controls will be available with their ScanPro for the types of film that they use.
6	Customizable text for all button controls.	All button controls have text labels that can be customized by the administrator. For example, you could have the name of the printer or the paper size that is being used appear right on the print button.
7	On-screen help support for all controls.	The on-screen help menu has been expanded to include additional information and detail for the use of all of the ScanPro 2000 controls.
8	Custom Crop (scissor snipping).	In addition to the normal "rectangle" cropping you can now crop an irregular shape in a single step (snipping tool).
9	SPOT-Edit™.	This popular app has been redesigned so that the patron can adjust as many picture and text areas as needed right on the screen image. The adjustments can be automatic with a single click or adjusted manually using the image brightness and contrast controls. The patron can also erase or redact any selected area with a single click.
10	ON-SCREEN MOTORIZED ROLL FILM CONTROLS:	The on-screen control module for the motorized film carriers has additional control capabilities (all of the controls are listed here):
a	Automatic Image Framing (fast film movement stops and displays the closest full image).	A check box on the title bar turns this feature on/off
b	Precise slow speed film control.	This micro positioning capability makes it possible to accurately position the film image on the screen using the on-screen controls. No manual controls are required. The ScanPro 2000/1000 has the only motorized controller that provides this capability.
c	Adjustable Slow Speed.	Patron adjustable, on-screen, slow speed control.
d	Scroll Speed Lock.	With the "scroll lock" on, any slow speed selection will remain on. The patron can click anywhere on the screen to turn "scroll lock" off.
e	Medium Speed.	Active when the carrier glass is closed (buttons not "grayed-out")
f	Fast Speed.	Active when the carrier glass is open (buttons not "grayed-out")
g	Automatic rewind with Auto stop.	Active when the carrier glass is open (buttons not "grayed-out"). This capability is only found on the ScanPro 2000/1000.
